

SPEAKERS

Dr. Guoyi Han

Senior Research Fellow, Stockholm
Environment Institute

Associate Editors, [International Journal
of Disaster Risk Science](#)

Dr. Han specialises in nature-society synthesis in the areas of human dimensions of environmental change, natural disasters in developing countries, water resources, and applications of Geographic Information System (GIS). His earlier research experience concentrated on watershed management in connection with non-point source water pollution control. Over the years, his research has expanded to include environmental impact assessment, regional environmental planning, risk analysis and hazard management, dynamic nature of vulnerability and resilience of human-environmental systems. More recently, he has been focused on understanding systemic risks and mainstreaming disaster risk reduction; energy system transition and climate policy in China; China and its transition, and the broad environmental and social implications of that transition.
